Rethinking Violence: Understanding the PAR Model

A brief description of the Violence Integrative Prevention and Restoration (PAR) Model and comparison to the traditional punitive model for preventing and responding to violence

It's not about hatred, getting even, what anyone deserves, settling scores, making an example, punishing some and comforting others, making anyone pay, exclusion, or wiping anyone out. It's about

RESTORATION

Healing. Making everyone whole. Wiping out the disease, not those afflicted by it. Restoring those deprived by violence of their place in the world. It's about ending the 5,000-year-old way we see and deal with violence.

What is the PAR Model?

The Violence Integrative Prevention and Restoration (PAR) Model is a demonstrated, evidence-based, cognitive approach to violence response and prevention built upon a public health foundation. The PAR Model incorporates new thinking about and language for describing violence, provides a new framework for preventing and responding to violence, and presents an effective alternative to the commonly used traditional punitive-based approaches for dealing with violence. The PAR Model integrates a broad range of diverse disciplines, including social theory, neuroscience, the public health approach, developmental theory, physiology, and evolutionary psychology.

The components of the model's name and what those elements refer to are:

Violence	The model is directed toward the public health challenge of violence.
Integrative	The model integrates multiple concepts and disciplines, including researched and demonstrated elements.
Prevention	Preventing violence is a central objective of the model.
Restoration	Restorative justice (making those involved whole) is a central theme of the model.
Model	This approach is a template for describing and responding to violence.

Under the PAR Model, violence is treated as a disease that has unique characteristics in terms of how it presents in individuals and groups, how it spreads, and how it replicates itself. This “thought-borne pathogen” has its roots in powerlessness, superstition, and threat.

Human beings need to have the power to survive and thrive. Healthy examples are the power of meaning, belonging, well-being, respect, freedom from racism and persecution, compassion, creativity, and community. When healthy power is not available, the only source of power is unhealthy power, the most severe expression of which is violence.

The PAR Model addresses all forms of violence, from interpersonal to international.

— US Department of Defense

How is the PAR Model applied?

The PAR Model uses the public health approach to respond to violence. That approach includes five steps:

- 1. Assessment** — The first step is to assess outbreaks of violence. During the evaluation, the response team looks at how violence manifests in a community, how it is transmitted, the presence of risk factors, the types of power deprivation (poverty, joblessness, alcohol and other drug consumption, discrimination, etc.), the inventory of assets (physical, emotional, mental, situational, and transpersonal), and other factors.
- 2. Response Development** — Working with the stakeholders in the effort to eradicate violence, the team develops a response program designed to handle the emergency requirements related to the disease, lower the risk factors for violence, increase the presence of healthy power, leverage existing assets, and secure assets unavailable in the community from outside sources.
- 3. Response Application** — The response program is implemented in two ways. The first step is to conduct a series of demonstration applications to test the efficacy of the responses. Those parts of the response program that are ineffective are either abandoned or revised and retested. The second step is to apply effective protocols throughout the identified population.

4. Evaluation and Adjustment — The evaluation and adjustment phase is intended to secure evidence of the efficacy of the response program and to make changes in the program design that help create a more mature, thorough, and effective treatment.

5. Reapplication — The process has come full circle with the reapplication phase. The revised response program is applied, followed by steps three and four.

Does the PAR Model work with other violence-reduction programs?

The PAR Model provides a new way of seeing and responding to violence. Punitive-based programs will not operate successfully in conjunction with the PAR Model. Applications that are directed toward healing and are designed to help establish healthy power can effectively be complemented by the PAR Model. These include conflict resolution programs (including mediation), restorative justice approaches, police and military training, parenting education, job skills training, case management (e.g., treatment for specific challenges such as Post-Traumatic Stress Disorder), tutoring, peer advocacy, counseling, and other programs designed to increase healthy individual and collective power.

What are the advantages of the PAR Model?

There are significant advantages to applying the PAR Model. Some of these are:

1. It is practical, easy to understand, and useful.
2. It can be applied to all forms of violence.
3. The model eliminates the inhibiting qualities of the punitive model.
4. It frames the nature of violence in understandable terms.
5. It makes violence manageable.
6. It is a public health rather than a judicial approach.
7. The model is flexible – it is responsive to a broad range of settings and circumstances.
8. It is solution-oriented.

— Tbel Abuseridze (Unsplash)

Application of the PAR Model is effective in reducing hate and divisiveness.

What are the benefits of applying the PAR Model?

Among the wide range of benefits, the PAR Model can produce are:

1. Enhanced community safety.
2. Improved relations with and opportunities for disenfranchised populations.
3. Reduced victimization.
4. Decreased health care costs.
5. Lowered need for violence-related assets for dealing with violence (militarized police forces, security systems, violence prevention, and rehabilitation services, etc.).
6. Lessened overall risk-management indicators and their associated costs.
7. Reduced administrative expenses for responding to episodes of violence.
8. Decreased law-enforcement/criminal-justice costs.
9. Effective assessment of the impact of violence-reduction initiatives.
10. Improved effectiveness in dealing with those involved in violent episodes (perpetrators, victims, supporters).
11. Increased employment job satisfaction and morale.
12. Lowered employment turnover.
13. Reduced prison recidivism.
14. Enhanced family safety.
15. Interrupted transmission of violent behavior to succeeding generations.
16. Enriched the overall quality of life.

Key differences between the PAR Model and the traditional punitive model

The following table illustrates critical concepts and components of violence and how two different approaches for describing and responding to violence deal with each of these concepts and components.

Concept/Component	Punitive Approach	PAR Model
01. Historic application	Common forms of the approach have been used for thousands of years.	New model.
02. Foundation	Fear and shame-based (removal of perpetrator's power and control).	Power-based (reestablishing healthy power and control for all stakeholders).
03. Nature of violence	A moral and legal issue.	A health issue.
04. Definition of violence	Vague, varied.	Precise — differentiated from injurious (which may not be violent). Established criteria for qualifying as violence.
05. Orientation/focus	Protection oriented.	Solution-oriented.
06. Response objective	Punishment.	Prevention and restoration.
07. Moral valuation	Violence is seen as "bad."	Violence is seen as unhealthy.
08. Acts of violence are...	Single events	The extreme manifestation of a continuum of events

Concept/Component	Punitive Approach	PAR Model
09. Responsibility for violent acts	Perpetrator.	Perpetrator, contributors, supportive systems, and environmental conditions.
10. Perpetrator seen as...	The villain.	A key stakeholder in diagnosis, treatment, restoration process.
11. Violence occurs in...	Physical body, occasionally the emotional body.	Physical, emotional, mental, situational, and transpersonal bodies.
12. Preventive approach	Fear, aversion-based (threat of sanctions — from economic to incarceration to death). May require temporary or permanent time in prison.	Identification and reduction of risk factors, preemptive intervention, and redirection of power and control. May require temporary or permanent quarantine.
13. Response approach	Punitive — characterized by punishment, righteousness, scapegoating, demonization, revenge, retribution.	Public health approach — characterized by restoration (making whole) of all involved in the violence continuum.
14. Intervention methods	Interpersonal — identification, apprehension, adjudication, incarceration. International — economic sanctions, war.	Diagnosis and application of response protocols (interpersonal and international).
15. Language used	Personal negative descriptors — derogatory, demeaning, humiliating, condemning, depreciatory, critical, etc.	Behavior descriptors — vectors of transmission, infection rates, toxicity, trauma, addictive qualities, risk factors, etc.
16. Structural approach	“Drama triangle” — victim (to protect), persecutor (to apprehend), rescuer (to suppress and punish persecutor).	Public health approach — assessment, treatment protocol design, application of protocols, evaluation. Focus on accountability, restoration.
17. Acceptance of violence	Depends upon context — criminal violence not accepted; sanctioned violence approved.	All acts of violence require a response and treatment.
18. The role sanctioned violence plays	Considered a legitimate strategy for preventing and responding to violence.	Not considered a legitimate response — sanctioned violence most commonly aggravates the condition and can drive the growth and continuation of the malignancy.
19. Application areas	Law enforcement, corrections, international relations.	Education, healthcare, mental health, social relations (e.g., racism), interpersonal relations, law enforcement, corrections, international relations.
20. Effect upon resiliency	Erodes resiliency.	Builds resiliency.
21. Impact on management	Reduces management to punitive action.	It makes violence understandable; provides a context and structure for increasing effectiveness in monitoring, preventing, and responding to violence.

Comparing results

The following illustrates the impact of traditional punitive approaches as well as the PAR Model methodology. The effect of these approaches upon key precursors of violence is also shown.

Positive attributes are marked with a: *

Precursor/Outcome	Punitive Approach	PAR Model
Fear	Increases	* Decreases
Hatred	Increases	* Decreases
Rage	Is more likely	* Is less likely
Resentment	Increases	* Decreases
Scapegoating	Increases	* Decreases
Retaliation	Is more likely	* Is less likely
Demonization	Increases	* Decreases
Polarization	Increases	* Decreases
Confusion	Increases	* Decreases
Creative solutions	Are thwarted	* Are encouraged
Power-sharing	Decreases	* Increases
Compassion	Decreases	* Increases
Reconciliation	Is less likely	* Is more likely
Openness	Decreases	* Increases
Offender accountability	* Increases	* Increases
Adjunct participant accountability	Is not considered	* Increases
Societal accountability	Is not considered	* Increases
Victims	* Are empowered	* Are empowered
Offenders	Are disempowered	* Are empowered
Society	* Is empowered	* Is empowered
Hope	Decreases	* Increases
Effective management	Decreases	* Increases
Short term safety	* Increases	* Increases
Long-term safety	Decreases	* Increases
Results are...	"I win."	* "We heal."

Sheep (Blade Runner), The Minority Report, VALIS*

Ari Cowan is the Director-General of the International Center for Compassionate Organizations. For his work to end violence, he was awarded the 1998 National Public Health Award from the United States affiliate of the international physician organization that received the 1985 Nobel Peace Prize. He has made presentations on violence and compassion at various national and international venues, including the United Nations.

Mr. Cowan was cited — along with Nobel Prize recipient and former President Jimmy Carter and 1980 Nobel Prize recipient Adolfo Pérez Esquivel (among others) — for his assistance in bringing the first public edition of [*The International Bill of Human Rights*](#) to publication.

More information about Mr. Cowan can be found [online](#).

The International Center for Compassionate Organizations is a 501(c)3 nonprofit organization.
